DOYLE DRIVE
 Doyle Drive Replacement Project
 135 Main Street, Suite 1600
 San Francisco, CA 94105

**NOTICE:
 PRECONSTRUCTION
 ACTIVITY**

Tree Removal to Begin August 11

**OTHER UPCOMING
 PRECONSTRUCTION ACTIVITIES**

Utility Relocations

Existing utilities in the construction zone including potable water, sewer, telecommunications and electrical, must be relocated.

Necessary service interruptions will typically be scheduled between the hours of midnight and 4:00AM to reduce inconvenience to residents and tenants.

► Notification will be provided in advance of service interruptions.

**ONGOING
 PRECONSTRUCTION ACTIVITIES**

Native Plant & Seed Collection

Native plants and seeds are being collected prior to tree removal and will be grown in the Presidio Nursery to be used for post-construction landscaping and wetlands mitigation.

DOYLE DRIVE PRECONSTRUCTION NOTICE

Tree Removal to Begin August 11

Initial Tree Removal Areas

REPLACING DOYLE DRIVE WITH THE PRESIDIO PARKWAY

After years of intensive regional coordination, environmental reviews and careful planning, construction of the Presidio Parkway will begin in fall 2009. In addition to the innovative design, the replacement will provide critical improvements to the roadway's seismic, structural and traffic safety; enhance the transit, pedestrian and bicycle network in the area; and connect the park with cultural and recreational resources along the bay.

TREE PROGRAM OVERVIEW

To construct the new roadway, the area surrounding the construction site must be carefully cleared of trees and brush to accommodate construction activities and provide space for staging and equipment. Site preparation will begin on August 3 and tree removal will begin August 11 and continue for approximately eight weeks.

Although tree removal will initially result in a significant visual change, the ultimate re-landscaping effort will be extensive. The Tree Removal and Protection Plan has been carefully developed in collaboration with certified arborists and landscape architects to remove only the trees necessary and to protect trees that do not need to be removed.

Tree removal is being conducted during the dry season to reduce erosion, and will be performed outside of the bird nesting season, in accordance with the Migratory Bird Treaty Act.

One hundred percent of tree material will be recycled or salvaged by Greenwaste Recycling Yard in Richmond, California.

Schedule

Beginning August 3

Installation of perimeter fencing and development of staging areas

August 11 – October 2009

Tree removal

Tree removal activity and equipment.

GENERAL WORK DETAILS

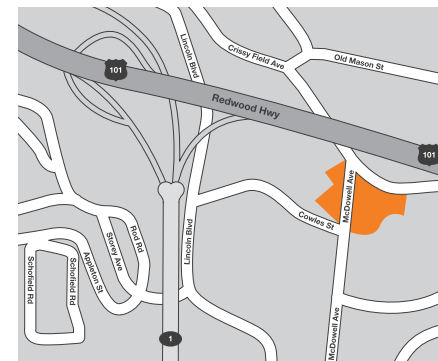

Tree removal activities will require the use of equipment such as chainsaws, excavators, log loaders, cranes and wood chippers. The tree removal method will be dependent on tree location, height, proximity to other trees and safety. Due to the height of the majority of trees, chainsaw noise will be intermittent; as much time is spent securing limbs and using cranes to safely lower sections of the trees to the ground.

Much of the chipping will be conducted at the work sites to reduce hauling trips, increase efficiency and help expedite the tree removal work. Chippers will be oriented to reduce noise to neighbors.

The staging area for tree removal will be located near McDowell Avenue at Cavalry Stables. The contractor will secure the staging area and will implement measures to reduce erosion and minimize dust. Equipment, as well as logs and woodchips, will be temporarily stored in this area.

Closures of Local Roads within the Presidio

In order to remove trees that overhang roadways, temporary lane closures and road closures will be required during normal work hours from time to time. The contractor will post appropriate signage in advance.

Staging Areas

General Work Hours

- 7:00AM – 7:00PM (Mon – Fri)*
- 9:00AM – 6:00PM (Sat)
- Limited Sunday work

*Chipping activities will be reserved until after 8:00AM to be sensitive to nearby residents.
